- Chief Engineer - Jason Webster - jason.webster@aquabotix.com

SwarmDiver Vehicles

Company Capabilities

Our Mission

Keeping the Operator Out of Harm's Way
Significantly increase probability of mission success through the power of more. Provide a simplified control experience, enabling operators to interact with the swarm as a single entity from a safe standoff distance.

Testing & learning

Close collaboration with our customers to prove out multiple mission types before moving to in-service use.

Sensor Integration

SwarmDiver's modular design and simplicity enables rapid sensor integration to user needs

Agility

As a small business we are able to pivot quickly and address emerging needs with the speed and focus to deliver mission capability.

System Capabilities

Ease of Use

Provide a simplified control experience, enabling operators to launch recover and to interact with the swarm as a single entity from a safe standoff distance.

Littoral Bathymetric Survey

Shallow water to surf zone bathymetric survey - faster and safer than divers in the water.

EDGE™ Perimeter Defence

Provide a visual deterrent above and below water for Port and Vessel defence.

Synoptic Data Gathering

Data is transmitted back to the operator in real time enabling situational responsiveness - not waiting for vehicle recovery to download data

Autonomous Deployment and Recovery

Integrated onto UUV, USV and UAV for long range deployments
