

Suburban Marine

Your Underwater Connector

OUR MISSION

Utilize new technology to produce subsea electrical connectors that reduce lead time, increase integration flexibility, and meet the harsh environment requirements our customers demand.

Your Underwater Connector Solution

Existing subsea connector manufacturing methods necessitate an integration bottleneck at the high pressure rubber injection molding machine, ignoring the advances in adhesive technology over the last 40 years. They can't make it until you order it, and the result is experiments going undone, machinery sitting in storage, and valuable inventory sitting on the shelf.

Our Innovation:

Only the business end of the connector needs to be injection molded! (and a few other things)

Our connector design removes the injection molding bottleneck, allowing the customer to integrate any backshell and cable with a mass-produced connector face. Simply choose the connector and backshell combination, solder wires, and backfill with epoxy to produce professional, full ocean depth cable assemblies.

the Baromax Connector

01 Bullet

02 Backshell

03 Locking Ring

04 Assemble

Features

The **Baromax Connector** is stocked and assembled by you, allowing for rapid delivery and on-site assembly.

Reduced lead time

8-pin

Minimize untwisted cable length

High current lamellar contacts

Locking ring mate & unmate

10,000 psi pressure rating

**Suburban
Marine**

**With Suburban Marine,
the marine industry will
have convenient access
to subsea electrical
connectors.**
