Introduction

Chapter 1 Review of the hydraulics of non-rotating, homogeneous flows.

- 1.1 The approximations of hydraulics.**
- 1.2 The shallow water equations and one-dimensional wave propagation.**
- 1.3 Nonlinear steepening and rarefaction.**
- 1.4 The hydraulics of steady, homogeneous flow over an obstacle.**
- 1.5 Hydraulics in abstract.**
- 1.6 Hydraulic jumps, bores, rarefaction waves and Long's experiment.**
- 1.7 Solution to the initial-value problem.**
- 1.8 Wave reflections and upstream influence in time-dependent flows.**
- 1.9 Friction and bottom drag.**
- 1.10 Entrainment.**
- 1.11 Nonlinear dispersion.**

Chapter 2 The hydraulics of homogeneous flow in a rotating channel.

- 2.1 The semigeostrophic approximation in a rotating channel.**
- 2.2 Uniform potential vorticity: boundary layers and Kelvin waves.**
- 2.3 Flow separation and frontal waves.**
- 2.4 Steady flow from a deep basin: the WLK model.**
- 2.5 Uniform potential vorticity flow from a wide basin: Gill's model.**
- 2.6 Uniform potential vorticity flow, revisited.**
- 2.7 Flow reversals and recirculations.**
- 2.8 Non-rectangular cross sections.**
- 2.9 Non-uniform potential vorticity.**
- 2.10 Transport bounds.**
- 2.11 Anatomy of an overflow: The Faroese Channels.**
- 2.12 Outflow plumes.**

- 2.13 Closed upstream basins with forcing and dissipation.
- 2.14 Comparisons between observed and predicted transports.

Chapter 3 Time-dependence and Shocks

- 3.1 Linear Rossby adjustment and geostrophic control in a channel.
- 3.2 Rossby Adjustment: Weakly Nonlinear behavior.
- 3.3 Rossby Adjustment in a channel: fully nonlinear case.
- 3.4 Long's problem in a rotating channel.
- 3.5 Shock joining.
- 3.6 The Kelvin bore.
- 3.7 Shocks in separated flows.
- 3.8 Hydraulic control in a dispersive system: flow over an infinite ridge.
- 3.9 Ageostrophic Instability

Chapter 4 Coastal Applications

- 4.1 Curvature effects and flow separation.
- 4.2 Coastal upwelling fronts and jets.
- 4.3 Oblique shocks and expansion fans: the supercritical marine layer.
- 4.4 Expansion fans and compressions: formal theory.
- 4.5 Rotating gravity currents.

Chapter 5 Two-layer Flow in Rotating Channels

- 5.1 Formulation of two-layer, semigeostrophic models.
- 5.2 Basic theory for a nonrotating channel.
- 5.3 Flow over an obstacle.
- 5.4 Flow through a pure contraction.
- 5.5 Overmixing and maximal exchange in estuaries.
- 5.6 Overmixing in inverse estuaries.
- 5.7 Maximal and submaximal exchange between two deep basins with rotation.
- 5.8 Maximal exchange through a pure contraction with rotation.
- 5.9 Strangulation of the baroclinic flow by the barotropic flow.

Chapter 6 Potential Vorticity Hydraulics

- 6.1 Introduction.
- 6.2 Potential vorticity front in a channel.

6.3 Equatorial jets.

6.4 A mid-latitude jet.

Appendices

A. List of selected notation

B. The method of characteristics in two dimensions.

C. The method of characteristics for 2-d, shallow flow with rotation.
